**DETAILED ACTION**

***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1, 3-10, 12, 13, 15-28, 32 and 33, drawn to a method and apparatus using a tow assembly, the assembly comprising a flexible frame, the receiver flexibly connected to a receiver support frame and a dual mode gain amplifier, classified in class 324, subclass 330.
- II. Claim 29, drawn to a computer program comprising a computer readable medium and instructions to operate a general electromagnetic antenna assembly, classified in class 702, subclass 5.
- III. Claims 30, 31, 34 and 35, drawn to trailing airborne surveying systems having specific antenna structures, classified in class 343, subclass 707.

The inventions are distinct, each from the other because of the following reasons:

Inventions in the Groups are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one

Art Unit: 2862

subcombination is separately usable. In the instant case, subcombination in Groups I and II have a separate utility from Group III such as assemblies not requiring interconnected members making up the frame members of the antenna structures or interconnected cables attached between the transmitter and receiver frames. Groups I and III have a separate utility from Group II such as not requiring a computer readable medium to operate. Groups II and III have a separate utility from Group I as not requiring a receiver antenna flexibly mounted to a receiver from or requiring a dual mode gain amplifier. See MPEP § 806.05(d).

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to and a message was left for Eugene Gierczak (Reg. 31,690) on April 25, 2006 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be

Art Unit: 2862

traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
